

Screening for Pheochromocytoma: Metanephrines

Anouk van der Horst-Schriivers

Department of Internal Medicine, UMC Groningen, Groningen, the Netherlands

Plasma free metanephrines are currently the test of choice for diagnosing a pheochromocytoma (PCC). However, interpreting the results can be difficult. This presentation will focus on “who, what and how”. Who is your patient? What is your reference range and how was this reference range established?
